SUMMARY

CS graduate (2025) with 7 months of internship experience writing Python code for web and backend features. Led delivery of two personal projects end to end – a job tracking system and an interview tool – covering database design, REST endpoint development, and performance testing. Works well in small teams, picks up new tools quickly, and focuses on shipping clean, working code. Open to SDE-1 and junior backend positions in Bengaluru or remote.

TECHNICAL SKILLS

Languages: Python, SQL, Java (basic)

Backend: FastAPI, Flask, REST endpoint design, JWT authentication, third-party integrations

Database: MySQL, schema design, query optimization, multi-field filtering

Tools: Git, GitHub, VS Code, Postman, Command Line

Concepts: Data Structures and Algorithms, OOP, MVC pattern, error handling, SDLC

Certifications: Oracle Cloud Infrastructure 2025 Generative AI Professional | Cloud Computing – NPTEL (IIT Kharagpur)

EXPERIENCE

Web Developer Intern

Feb 2025 – Jun 2025

Renu Sharma Foundation

Remote

- Developed the login and sign-up pages from scratch – connected frontend forms to the authentication layer, added field-level validation, and saw zero login failures reported post-launch.
- Introduced a shared component library across 3 pages using HTML, CSS, and JavaScript; team adopted it immediately, cutting repetitive styling fixes in later sprints by around 40%.
- Guided front-end task planning in a 4-person Agile squad, ensuring all personally owned work was delivered on time across 5 sprints with no blockers escalated.
- Maintained consistent Git practices throughout – structured branches, descriptive commits, and zero merge conflicts across 5 months of active development.

Python Developer Intern

Sep 2023 – Oct 2023

AICTE Virtual Internship – MotionCut

Remote

- Integrated OpenWeatherMap into a weather dashboard, handling JSON parsing and data transformation to display live readings for 50+ cities accurately.
- Replaced a manual 3-step extraction workflow with a Python script, reducing that task's processing time by roughly 60% and fixing a recurring data mismatch.
- Refactored the codebase into focused, single-purpose functions with consistent error handling – noticeably reduced debugging time during final testing.

PROJECTS

Smart Job Application Tracker | Python, FastAPI, MySQL | GitHub

- Designed and shipped a job tracking system with 8 CRUD endpoints in FastAPI – all routes completed under 300ms in load tests, including complex filtered queries.
- Cut redundant database reads by 30% by rewriting MySQL queries to filter on role, company, status, and date in a single optimized pass.
- Separated routes, models, and database logic into distinct modules from the start – new features added later required changes in one place only, with no regressions.

AI Interview Practice Bot | Python, FastAPI, LLM integration | GitHub

- Designed a question-and-feedback system for 5+ job roles using an LLM, exposing the functionality through clean REST endpoints with structured JSON responses.
- Solved a context-loss problem in early tests by adding server-side session tracking – the bot now holds full conversation state across multi-turn exchanges.
- Extracted prompt templates into role-specific config files, making it possible to add a new job role in under 10 minutes without touching the core logic.

EDUCATION

JNTU Anantapur

Andhra Pradesh, India

Bachelor of Technology – Computer Science and Engineering

Jun 2021 – Sep 2025

- CGPA: 7.28 / 10 | Coursework: DBMS, Operating Systems, Computer Networks, Data Structures, Software Engineering
